

Autobase® Plus MM

Issue

Akzo Nobel Solution

Color match is hard to achieve.

Autobase Plus has thousands of formulas for solids, metallic and pearls, which allow painters to match perfectly the color of any car that comes through the shop.

Toners are difficult to pour.

With Autobase Plus, pouring and mixing are foolproof because all of the toners have a similar consistency.

Basecoats that need too many coats to hide and cover.

Independent tests prove that Autobase Plus is up to 71% more efficient.

Basecoats that don't lay out smoothly and take too long to flash.

Unlike the other converted-intermix basecoats on the market Autobase Plus is a true basecoat, so you can count on it for exceptional sprayability.

Metallics leave halos or mottle.

Autobase Plus features a new binder technology that produces a more consistent metallic orientation.

For more than 20 years, the industry's best collision repair centers have turned to Akzo Nobel and Autobase for the perfect color match.

So, it's no surprise that Akzo Nobel is building on its history and reputation as the industry leader and is introducing **Autobase Plus**, which is more than a new product — it is the next generation of color.

And like its predecessor, Autobase Plus has thousands of formulas for solids, metallics and pearls, so you'll be able match virtually every vehicle that goes through the booth.

In addition to giving you the best color match in the industry, Autobase Plus offers better coverage, sprayability and metallic control.

In fact, independent tests show that Autobase Plus is up to 71% more efficient than some competitive products.

With Autobase Plus, you get the benefits of the first generation of Autobase coupled with even better sprayability.

Autobase Plus, which is incredibly smooth, eliminates problems such as contour mapping and allows the clearcoat to look its best.

In addition, Autobase Plus saves time because it only takes a few minutes to flash — just three to five minutes between coats and 15–20 minutes before taping or clear coating.

When it comes to metallic color, blending and matching have never been easier because Autobase Plus has superior metallic orientation so halos virtually never appear and it is possible to perform an invisible spot repair.

To put Autobase Plus to work for you, contact your distributor, Akzo Nobel representative, or call **1-800-2SIKKENS**. Or visit us at www.AkzoNobelCarRefinishes.com. ■
